Thread: [Flipper Zero BadUSB Payloads - #Free #OpenSource](#)

aleff - April 14, 2023, 12:03 am

Hello everyone,

I wanted to share with you a repository I created called "my-flipper-shits". This repository contains several useful payloads for FlipperZero in the BadUSB category. If you're not familiar with it, FlipperZero is a powerful tool for pentesters and hackers that can act as a universal device programmer and a hardware debugger. The BadUSB payloads in this repository can not only be used for security analysis, but also for harmless pranks and fun experiments.

Feel free to check out my repository on GitHub and let me know what you think. If you have any feedback or suggestions for improvement, I'd be happy to hear them. Thank you for your time and happy hacking!

Best regards,
Aleff ?

Im not able to PM because I am too new. What offers do you make for Amazon Giftcards, lets say for ones that are \$25 and \$50?
