Thread: [Hey can yall help me plan out how I Should Hack to the college computer](#)

dasd asdadsas - April 19, 2023, 3:16 am

my mission is to get a keylogger on it and have a backdoor setup, I know how to set up an autorun external disk and I got the password what is the best and safest way to proceed with this mission

?{ RadioActive Hack }? - April 19, 2023, 3:41 am

What do you want to do? What's your goal?

It's impossible to provide a good attack without knowing what you want out of it.

Also, is the computer using network session login. I'm not sure what the actual name for this is. (a computer in a network where the credentials for each user will work on all computers in the network) If it is, it is very possible that anything you try with one set of credentials will not affect anyone that logs in with other credentials.

Please do not use your own credentials to launch any kind of attack, you will get caught. it will probably lead to exploitation and legal repercussions. Universities usually press charges on students that get caught for any type of hacking with their systems.

First of all, Autorun is from like ten years ago. Try to get an application to autoplay on Windows 10. You'll have to do privilege escalation and defeat Deep Freeze, which seems to be impossible at this point without that password.

I see that you have an admin password, but Deep Freeze will still keep your keylogger from being written to disk.

Why risk your future doing something like that? You won't even succeed in what you're doing, and if/when caught you will risk getting charged.

You're better off using your time learning something useful tbh.

Go PM [National Crime Agency UK](#) , they will help you get on the right track.

DeltaNine - April 20, 2023, 5:10 am

don't do it. get smarter
you are in college now

Xogg - April 20, 2023, 6:00 am

Not worth it, here is my story on why

Regulus - April 20, 2023, 6:03 am

Yeah I'd advice you not to do that kind of stuff.
You're gonna get in trouble.

Dread.Reaper - April 20, 2023, 8:24 am

Unless you joined this college for this explicit reason and purpose.

I ask one thing? What the fuck is going through your head?
You seriously going to risk your future playing stupid games?

Grow up.

I am sure you meant R_emcos maybe?

Ramco is an automotive parts manufacturer.

padrino - April 22, 2023, 5:11 am

Agree with all of the above. You'll fuck up your future - don't bother.

If you're really interested in this stuff then pursue it and study it with everything you have, but do it legally - you could have a great and successful career in the Cyber Security Industry.

But if you're looking to just screw around and steal shit you'll end up in jail.

Choose the right path, my friend.

What's the purpose of doing that?
