Thread: [Issue with Mybb](#)

**Scrimswap** - April 19, 2023, 10:37 am

How can I replace usernames with gifs? Completely. I love the way it looks and I just cant figure out how to do it. I got told i could make the username invisible and add the gif as the background. But I don't know how I would code that to go in the group username style. I'm so lost as to what to do help would be great. Thanks!

To replace usernames with GIFs on MyBB, you can use the following steps:

Firstly, you need to find or create the GIFs you want to use to represent the usernames. You can use online GIF makers or create your own with software such as Adobe Photoshop.

Once you have your GIFs, you need to upload them to your website's server. You can do this via FTP or through the MyBB Admin Control Panel.

Next, navigate to the MyBB Admin Control Panel and click on "Templates" in the sidebar menu.

Select the template you want to modify and click on "Edit" to open the template editor.

Find the section of the template where usernames are displayed, which is usually in the postbit or postbit\_classic template.

Within this section, locate the variable that outputs the username, which is usually `{ $post['username'] }`. Replace this variable with the HTML code to display the GIF, which will look something like this:

```

```

Make sure to replace "path/to/your/gif.gif" with the correct path to your GIF file.

Save your template changes and test your website to ensure that the GIFs are displaying correctly.
