Use tampermonkey.

Very simple - just handy to have while you browse the internet. It will unhide all hidden fields on the website - you never know what you'll find.

Dread.Reaper - April 22, 2023, 8:31 am

Was just playing with this.

Come across some interesting things with this one.

Turned it off after playing around though, really makes a site look junky when its turned on. lol

Lukasi - April 22, 2023, 10:01 am

How do I use this? Paste the code into the web page source code?

Install tampermonkey addon for your browser and add this as a script.

I have already installed it. Tampermonkey is a great tool?

The_unknown - April 22, 2023, 5:11 pm

Hi thanks this Helps me a lot

Money- - April 22, 2023, 5:12 pm

You can also do this via burp suite custom regex for the response and request options too. But yea thanks for sharing another way via tamper script. Either way works!

LeetSpeed - April 23, 2023, 8:01 pm

Thanks for this! it has come in handy.

McJefferson - April 25, 2023, 12:39 am

Thank you, that's interesting. I'll keep this on for a while and see what happens.

What kind of findings have you encountered already with such script?
