Thread: [How to reFUD/reUD a crypter that is detected?](#)

Error_33_6070 - April 23, 2023, 7:20 am

Hello. i have a few crypters and not great knowledge in programming, do we just need to rewrite the stub to make it undetectable again? i just want to bypass windows defender.
any info would be appreciated, best regards.

As you no doubt know, the stub decodes the payload. If that's all you do, the file will certainly be undetectable.

I tried the same in the passt i tried to refud lime crypter and tools around Github, it was a very difficult task, its more easy to create a POC Crypter that actually bypass everything, than trying to make a well know detected tool again invisible for av

This is true, the whole game comes down to pattern recognition and common signatures.
