Thread: [Showing a client website - HTML & CSS only - Functional Dark Mode](#)

r1seN - April 25, 2023, 7:42 am

Website: <https://thehawkinscompanies.com/>

I wanted to showcase a project for a client that I've been working on using only HTML & CSS. 100% custom coded, no WordPress, Squarespace, or any page builders.

The dark mode also goes really well with the theme of my client's logo/design while also being functional.

I strictly do static websites for small business clients, so I don't do any backend or need to use any frameworks.

I've got other work on my website here: <https://www.beyondvisualmarketing.com/>

Feel free to give feedback/criticize!

It seems choppy, not smooth, like old-school design.
