Thread: [How do I port forward for a RAT on a RDP](#)

slezer - April 26, 2023, 6:05 am

I am setting up a RAT on a RDP I bought and I realised that no ports are open and I have no way of opening one. I tried using playit.gg but I am unsure whether or not I have to listen on the playit dns or on 127.0.0.1 (the RDP's IP). What can I do to 'open' a port on the RDP?

Thanks.

if you have your RAT on RDP, all you need to do is to set a new port forwarding rule in windows firewall

I opened a port and Quasar RAT is working but AsyncRAT isn't working. I checked with canyouseeme.org and the port is opened. Does the AsyncRAT stub work on Windows 11? my server is on a Windows 10 machine.

Edit: I just got it to work by adding the port Inbound and Outbound, thanks for your help.
