Thread: [need help with basic dns and listening stuff](#)

dookpook - April 26, 2023, 6:11 am

Im trying to setup a RAT tool but i cant get it to work with my dns server which is directly linked to my ip

so if some1 wants to help me for "free" or something we could think about then add my discord

[deleted]

all help appreciated [warn]

Dread.Reaper - April 26, 2023, 11:32 am

More information...

What rat?

What DNS?

Is the port opened and forwarded? (Canyouseeme.com)

dookpook - April 26, 2023, 11:42 am

im using quasar rat it has a gui and it looks user friendly and im tryna use it on my local ip and idk if i opened a port so thanks i havent thought about that, but how can i check that? i know with nmap but i dont have that on my windows machine

What do you mean by local ip#?

Your Internal IP# or Modem #?

Are you trying to run the client within the network or across the internet?

Midi-Chlorian - April 26, 2023, 3:19 pm

Firstly, make sure your ports are opened for your specific device on your network. You can configure this within your router's settings. Some routers may block the traffic coming from the client for security reasons (blocking inbound traffic), so keep that in mind. Also, don't configure your DNS to redirect traffic to your local IP. That doesn't make any sense. You need to redirect the DNS to your global IP.

Dontcha hate when people come asking for help and provide like literally ZERO information to work with?

Honestly reason I am replying to OP is to demonstrate the information required to get a proper answer from the community.

More Information Provided in request = Better % of getting a HQ solution.

Haha yeah, there is something beautiful about this post though. They had the balls to reveal they're a newbie which I respect.

Hey absolutely no qualms there, You cant learn something if you dont ask and be honest with yourself in how much help you need.

dookpook - April 27, 2023, 3:05 am

hey guys im not home atm i will try to research the things yall said when im back, if someone wants to help me pm ur cord or something coz i got warned already

Take the hint about offsite communication then. Its for your own protection.

dookpook - April 27, 2023, 11:05 am

i have a few answers and a few questions

- im using a dns by noip.com and ive routed it to my public ip adress
- how can i mask my ip if its routed to my own ip adress?
- i used the standard port (4782) and ive looked ip up on 2ip.ru and it has been opened by my firewall settings on my pc (i havent touched my router setting because first time i couldnt get in and quasar had a option with automatic port forwarding so i just thought that was good enough)

also, thanks guys for just being friendly and not laughing at me for being a noobie

noip.com does not allow that activity, they will ban you once they see that kind of protocol going on.

Mask your IP# using a port forwarding VPN service.
Router port forwarding needs to be set to point to your internal network IP#

what dns should i use than? (with no log policy if needed)
which service do you recommend/are there any good free ones with no log policy.
is there any youtube tutorial that you can recommend?

Good and Free do not combine well together.

You need something like <https://hackforums.net/showthread.php?tid=6237219>

VPN provider needs to have a no log and port forwarding option to ensure that connectivity is setup correctly and by using this configuration your IP# is masked and you dont have to touch your router.
