Coded with Python!

Introducing BlackHawk AI MailMaster The Ultimate AI-Powered Email Automation Tool for Your Business Growth

Transform your email marketing campaigns with our phenomenal AI-Powered Email Automation Tool! Designed specifically for businesses seeking a competitive edge, this Python tool incorporates cutting-edge artificial intelligence to maximize engagement and skyrocket your conversions.

Key Features

- 1 AI-Enhanced Descriptions: Harness the power of AI to generate enticing product descriptions and email subjects that captivate your audience and boost open rates.
- 2 Spam Detection Avoidance: The integrated AI technology intelligently avoids red flag words and phrases, ensuring your emails land safely in your recipients' inbox.
- 3 Automated Email Sending: Configure and send bulk emails effortlessly with a seamless SMTP integration.
- 4 Custom Emailing Lists: Manage email lists with our built-in list generator, targeting the right audience every time.
- 5 Flexible Email Templates: Personalize your emails for each recipient using product information, name, and preferred salutation.
- 6 Multimedia Rich Content: Embed images directly into your emails, increasing their visual appeal and engagement potential.
- 7 Ad Integration: Maximize revenue with Google AdSense support, placing strategic ads within your campaigns.
- 8 Call-to-Action Button: A clickable button in each email directs users to follow a link, driving traffic to your website, downloads, or other desired destinations.

Easy Setup and Usage

With a simple configuration file, setting up this tool is a breeze. Provide your SMTP server details, email lists, product information, and email templates, and the powerful AI takes care of the rest.

See here in action!

Email example with simple HTML template!

Email Received ?

How to Use This Tool

- 1 Store your email lists in a .txt file, with each email address on a separate line.
- 2 Configure your settings (SMTP details, email content, attachments, and more) in the provided newconfig.ini file.
- 3 Adapt the Python code to suit your specific campaign requirements, if necessary.
- 4 Run the program and watch as your AI-driven email campaigns are sent to your curated email lists.

Elevate your email marketing strategy with the Ultimate AI-Powered Email Automation Tool. Get started today and experience the remarkable difference it can make in your business growth. In this example we use gmail that has a limit of 500 emails daily (i think that is enough for one day) but if you want you can use a paid email with no limits!

Lifetime Package : 39.99 USD
All Order's are final!

Here is a free version with basic functionality to test it out (This version works but it's not like the paid one, it has no AI function like the paid one): [Free Version](#)

So whats the point of AI if you have to import your own list?

Nightmare - May 7, 2023, 10:08 pm

(May 7, 2023 05:05 PM)Loot™ Wrote: [\[CITE\]](#) So whats the point of AI if you have to import your own list?

AI is creating the description of your product, the Subject of your email to make it more attractive to your clients! It doesn't use red flag words to avoid spam detection and also it can make your html template. The list you have to import is the emailing list and your smtp info, files you want to send, pictures. Let me know if you need any extra info for the project!!

Sec13B - May 8, 2023, 10:31 am

can make the photos with another resolution, i don't understand
thank you

thank you

Ohh sorry about that, i will yes! The photos are showing how it is creating the subject, the body with AI for the email and then it start sending the emails until the list finishes! Then it remove SUCCESSFULLY send emails from the emailing list!

Sec13B - May 8, 2023, 5:30 pm

yes , but are small resolution , i cant see what do .

mkdiretc - May 8, 2023, 10:06 pm

Do you offer a test ?

Check your messages!But on the free version there is no AI functionality,like the one here.

Updated,added AI thinking to all functions that use AI to generate!
