Thread: [Ten best google dorks for hacking: Noob Tutorial](#)

PsychoArsenal - May 7, 2023, 7:35 pm

Welcome, hackers! Today, I'm going to share with you the 10 best Google Dorks for hacking.

Google Dorks are search strings created to locate specific information, such as vulnerable websites, online databases, and any other type of confidential or sensitive data.

These advanced search techniques can be invaluable when trying to uncover the latest information or gain access to specific resources. As a hacker, you need to use the power of Google Dorks to your advantage.

So, let's get started! The first in our list of the 10 best Google Dorks for hacking is: `intext:"restricted access" "password" -site:gov`. This search string will reveal any websites with restricted access that list their password in plain text. A good tip to remember is to add `"-site:gov"` at the end of your search string to avoid government websites.

The second Google Dork we have is `filetype:log inurl:.log`. This is a great search string that will help you locate files containing login information. It's especially useful when you are trying to gain access to a system without knowing the password.

The third Google Dork on our list is `allinurl: admin login php`. This string is used to search for websites with administrative logins written on insecure PHP pages. It's perfect for those instances when you want to uncover sensitive information from behind a login page.

Other top Google Dorks include: `inurl:password recovery`, `allinurl: login asp`, `intext: SQL syntax error`, `inurl:/cgi-bin/mailto.cgi`, `allinurl:admin/index.php?page=login`, `intext:password reset`, and `inurl:/index.php?page=register.php`.

Using these Google Dorks can help you quickly gain access to confidential data from vulnerable websites and protected systems. With a bit of creativity and some clever search strings, you can quickly become an expert hacker!

So there you have it - my 10 best Google Dorks for hacking! I hope this information was helpful and that you feel more confident about using Google Dorks during your next hacking session.

Thanks for reading and happy hacking!
