Thread: [Lime RAT AES KEY question](#)

LuckyLucianoDEV - May 16, 2023, 12:10 pm

does any one know what to put on the AES KEY ? I have seen different videos in which people put just a random key and it will go thru but I try it and also goes thru but the port I try using says closed does any one know why my port says closed ?

Please do not use outdated malware on your computer.

The first thing you need to do if you want to use this malware anyway is buy Windows RDP where all ports are open, such as crazyrdp.com or any other.

I recommend that you use next-generation malware such as Tornado Botnet; please read about it.

The Advanced Encryption Standard (AES) is a symmetric block cipher chosen by the U.S. government to protect classified information. AES is implemented in software and hardware throughout the world to encrypt sensitive data. It is essential for government computer security, cybersecurity, and electronic data protection.

That means the AES key is like a password. The longer it is, the safer you should be. I don't know how safe it is and in what places that outdated malware uses this encryption.

So I can create my AES key to use LimeRAT?
