Thread: [Extracting reports from Hackerone.](#)

Mr. Robot - May 23, 2023, 9:26 pm

So it's bug hunting season, I think if we can - let's use this thread to extract report information and use ChatGPT to simplify it.

The main reason for this is other websites might be vulnerable to exploits found only on Reddit for example. So vulnerability reuse and code misconfiguration we can leverage.

<https://hackerone.com/hacktivity>

All I am asking of you, is to stop in every now and again on this thread - grab a new Bounty report that is Disclosed on hackerone and use ChatGPT to simplify it for reuse.

For example here is the first one:

<https://hackerone.com/reports/1962645>

ChatGPT response:

Prompt for you to use on ChatGPT

Code Can you remove all the unneeded information from this so it's only the following:

Target site:

Full Vulnerable URL:

Type of Attack:

Payment Reward if applicable:

Where relevant please include a broad understanding of what caused the vulnerability

I do not need a summary or Impact
