Thread: [\\$XX,XXX - Auth bypass for mobile app](#)

lolMOKITO - May 27, 2023, 1:44 am

This is high stake gig my company needs done.

Our firm has over 80 accounts that are in our possessions on one sport app, created by us but issue is in the fact that we lost access to the emails on those accounts. Emails got banned for all these 80 accounts and we can't verify 2auth key when trying to log into the app. We are original owners of those gmails but due to not so smart moves from our automation team, they got flagged and banned. We still have access to those email though, just they remained blocked.

The app exists in both Android and IOS environment. We already removed SSL pinning from the APP and we can provide network logs what APP sends out when trying to log in and write 2auth code.

We need someone to help us log into these accounts and possibly find bypass to 2auth code because gmail banned our emails and we can no longer access them. Trying to social engineer this app's support team is a NO GO and also contacting gmail and trying to social engineer is also a NO GO due to the time limits we have.

Deadline : Next 2 weeks

Budget: We have up to 5 digit budget for this if you are successful in entering in these accounts. We can either pay per entrance or all at one if you can prove to us you really managed to sneak in.

We can provide all necessary info such as network logs(Charles, HAR or whatever), proof that we own those emails etc. for whoever tries to help us on this.

Please contact us only if you have experience in finding such bypasses.

PM me for more info

[contract=tid]Start Contract[/contract]

sorry to tell you that no way you can get closed/banned account back from Gmail side but your best chance to get the access from the app side
