Thread: [./ Reaper Secure File Wipe ./](#)

**Dread.Reaper** - May 27, 2023, 3:19 pm

Written in C++

Reaper Wipe is a secure file deletion program. It will bombard any given file with 0's and 1's before permanently deleting the file forever making recovery of the files contents impossible.

Screen shot:

Cocaine Bear sounds interesting by the synopsis on Google.  
( and of course the delete thingy too lol)

Lmao rigggghhhhtttt ;)

**murado** - May 28, 2023, 1:17 am

Nice share mate, thanks.

Terrible movie, thats why I selected it for Deletion to never come back. lol

**PureCoder** - May 28, 2023, 10:09 am

Good share.

Would be also useful to change creation time, last access time, last write time for privacy and hide original date

Also make sure to check file's attributes, maybe the file is on readonly.

Try to make a few loops (ex. 4) on 0,1 filling method, I think it's better to rewrite multi times just incase.

Oh I should have specified, on each Pass it rewrites the file.

That's the funny part I watched that movie a month or two ago n the whole time I was like wtf....immediate delete afterwards....but perhaps it would have been a better experience had I been on the same mental state as the bear ;)

Cool, please keep this kinda conversation in the Lounge.

It really has nothing to do with the OP thread.
