Thread: [QUESTION ABOUT OPENBULLET IMG.PHP BYPASS](#)

FS1337 - May 28, 2023, 9:23 am

Hi, today i was trying to figure out how to bypass or create variables for an site like this:

<https://polishsource.cz/img.php>

since login is -> username=wffewfwe&password=fwefewfewfwe&vImageCodP=1sj3niez

is there a way to create an variable to capture the data from the image?

when i use "get" method on the request block and put in the url, the result is this below, which is obviously not helpful and not the right way

```
{"$type":"System.Collections.Generic.List`1[[RuriLib.BlockBase, RuriLib]], mscorlib", "$values":[{"$type":"RuriLib.BlockRequest, RuriLib", "Url":"https://polishsource.cz/img.php", "RequestType":0, "AuthUser":"","AuthPass":"","PostData":"","RawData":"","Method":2, "SecurityProtocol":0, "CustomHeaders":{"$type":"System.Collections.Generic.Dictionary`2[[System.String, mscorlib],[System.String, mscorlib]], mscorlib", "User-Agent":"Mozilla/5.0 (Windows NT 10.0; Win64; x64) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/80.0.3987.149 Safari/537.36", "Pragma":"no-cache", "Accept":"*//*", "CustomCookies":{"$type":"System.Collections.Generic.Dictionary`2[[System.String, mscorlib],[System.String, mscorlib]], mscorlib"}, "ContentType":"application/x-www-form-urlencoded", "AutoRedirect":true, "ReadResponseSource":true, "EncodeContent":false, "AcceptEncoding":true, "AllowEmptyHeaderValues":false, "MultipartBoundary":"","MultipartContents":{"$type":"System.Collections.Generic.List`1[[RuriLib.Functions.Requests.MultipartContent, RuriLib]], mscorlib", "$values":[]}, "ResponseType":0, "DownloadPath":"","OutputVariable":"","SaveAsScreenshot":false, "ProtocolVersion":{"$type":"System.Version, mscorlib", "Major":1, "Minor":1, "Build":-1, "Revision":-1, "MajorRevision":-1, "MinorRevision":-1}, "ProtocolVersions":{"$type":"System.String[], mscorlib", "$values":["1.1", "2.0", "2.1"]}, "Label":"REQUEST", "Disabled":false}]}
```
