Thread: [Admin user wordlists?](#)

w0o0rm - June 3, 2023, 2:04 am

Looking for admin username/password wordlist to use with brute forcer tools like hydra. Any help would be appreciated.

Hey buddy,

The best help I can provide you is to tell you that if you have any skills related to security/hacking you should look at getting a job related to this field, that's safer and more stable than dealing with black hat activities, and the most important you can enjoy each day of work :)

The Internet is a wonderful tool, don't waste your energy and your time trying to break it ?

DramaKing - June 3, 2023, 1:01 pm

There are no 'admin' wordlists, just plain wordlists. Weakpass.com is a good source.

cPanel:
Username: root or admin

WHM (Web Host Manager):
Username: root

Thats a list of some of the common ones used for various platforms.
What you likely really are going to want to search for is combo lists.

Also consider this the extent of me answering this topic. The fact I found that on a quick google search as a first result shows your not even willing to do your own research.

If you want to have a good experience in this community you have to demonstrate to the community members your trying to learn on your own. otherwise your likely gonna get trolled, hard.
