Thread: [Unleash Your Inner Hacker! Join the Ultimate Hacking Course for FREE!](#)

Dread.Reaper - June 3, 2023, 12:52 pm

Attention aspiring hackers, cybersecurity enthusiasts, and digital adventurers! We are excited to announce an exclusive opportunity for 5 lucky individuals to enroll in our groundbreaking "Shadowstrike: Mastering the Art of Cyber Intrusion and Defense" course absolutely FREE of charge! ?

Are you ready to dive into the depths of the digital realm, unraveling secrets, and honing your skills as a master hacker? This comprehensive course covers everything from network reconnaissance to advanced penetration testing, equipping you with the knowledge and techniques to navigate the complex world of cybersecurity.

? What's in it for you? ?

- ? FREE access to the complete course materials and curriculum.
- ? In-depth exploration of network security, ethical hacking, and digital forensics.
- ? Guidance from industry experts and real-world scenarios.
- ? Hands-on practical exercises to sharpen your hacking prowess.
- ? Exclusive membership in a thriving community of like-minded individuals.
- ? The opportunity to shape the future of cybersecurity by providing valuable feedback.

? How to Qualify? ?

To secure one of the limited spots, you must meet the following criteria:

- 1 Demonstrated willingness to learn independently and be self-motivated.
- 2 Active participation and engagement in the cybersecurity community.
- 3 Consistent and constructive contributions to discussions and knowledge sharing.
- 4 Awareness that your post activity will be reviewed to determine acceptance.

If you meet these qualifications, reply to this thread expressing your interest and enthusiasm for the course. Our team will carefully review your profile and contributions to the community.

? Calling Senior Members! ?

We are also seeking two experienced senior members to review and provide advice on the course materials and curriculum. As a senior member, you will play a crucial role in ensuring the quality and effectiveness of our training program. But that's not all! We have an additional opportunity for senior members to co-manage the ongoing training course and participate in profit sharing.

- ? Get hands-on experience with cutting-edge hacking techniques.
- ? Influence the future of cybersecurity education.
- ? Collaborate with a diverse team of experts and make lasting connections.

? Enjoy profit sharing as a co-manager of the training course.

To be considered as a senior member and co-manager, please reply to this thread, highlighting your qualifications and expertise in the cybersecurity field, as well as your interest in the profit-sharing opportunity.

? Don't Miss Out! Act Now! ?

This is an exceptional opportunity to embark on a transformative journey into the world of hacking. Places are limited, and only those who demonstrate a genuine passion for cybersecurity and active community involvement will be selected. Secure your spot by replying to this thread and let us know why you're the perfect candidate to take this course for FREE!

Together, let's unlock the secrets of the digital universe and embrace the power of ethical hacking. Join us in "Shadowstrike: Mastering the Art of Cyber Intrusion and Defense" and become the hacker you were destined to be!

Course Topics (Work in progress, likely more to be added) Spoiler ([Click to View](#))

"Network Ninja: Unleashing the Power of Connections"

Summary: Dive into the world of computer networks and gain a comprehensive understanding of network topologies, protocols, architectures, and devices. Master the OSI and TCP/IP models, troubleshoot network issues, and learn essential network security considerations.

"System Breakdown: Mastering the OS Landscape"

Summary: Explore the fundamentals of operating systems, including Windows, Linux, and macOS. Understand file systems, permissions, command-line interfaces, and network configuration. Learn about vulnerabilities, user management, and system administration best practices.

"Network Alchemy: From Chaos to Connection"

Summary: Learn how to identify and resolve network misconfigurations. Gain expertise in IP addressing, subnetting, DHCP, and DNS. Discover network configuration best practices, IP address management, troubleshooting techniques, and network monitoring tools.

"Protocol Manipulator: Unraveling the Network Matrix"

Summary: Delve into common network protocols like TCP, UDP, ICMP, HTTP, and DNS. Gain insights into IP addressing, subnetting, DHCP, and DNS functionalities. Learn about protocol analysis, vulnerabilities, and securing network services.

"SecureScape: Crafting Shields for the Cyber Battlefield"

Summary: Get introduced to network security fundamentals, including concepts, terminology, and types of network attacks. Explore defense mechanisms like firewalls, IDS/IPS, and VPNs. Learn about encryption, secure communication protocols, threat modeling, and incident response.

"Hacker's Playbook: Unveiling Secrets for Good"

Summary: Adopt the mindset and methodology of ethical hacking. Learn reconnaissance, scanning, enumeration, and vulnerability assessment techniques. Discover information gathering methods, active and passive reconnaissance, and vulnerability scanning tools.

"Infiltration Tactics: Mastering the Art of Breach"

Summary: Explore advanced network penetration testing techniques. Exploit network vulnerabilities, crack passwords, escalate privileges, and maintain access. Learn about information gathering, exploitation frameworks, and covering tracks.

"Web Hacktivist: Exposing the Underbelly of the Internet"

Summary: Dive into web application security, including architecture, common vulnerabilities like SQL injection and XSS, and web application security testing tools. Gain insights into web application security assessment methodologies, session management, and secure coding practices.

"Wireless Phantom: Unleashing the Invisible Intruder"

Summary: Explore wireless network security, including Wi-Fi and Bluetooth networks. Learn about wireless security protocols, encryption techniques, wireless network penetration testing, and securing wireless networks.

"Digital Traces: Unraveling Secrets in the Network Shadows"

Summary: Discover the world of network forensics and incident response. Learn how to capture and analyze network traffic, perform log analysis, and handle incidents. Gain insights into network traffic capture tools, event log analysis, and legal considerations.

"Hacker's Code: Navigating the Legal Labyrinth"

Summary: Understand the legal and ethical considerations in ethical hacking. Explore the legal framework, responsible disclosure, industry certifications, and the career path of an ethical hacker.

"Code Manipulator: Unleashing the Scripting Arsenal"

Summary: Learn programming and scripting languages used in hacking, such as Python and PowerShell. Discover scripting techniques for automation and building custom security tools. Explore secure coding practices and code analysis tools.

"Ghost Mode: Protecting Your Digital Footprint"

Summary: Understand the importance of operational security (OPSEC) in hacking and cybersecurity. Learn countermeasures to protect against surveillance, secure digital communications, and minimize online footprint. Explore threat modeling, secure communication channels, and privacy-enhancing tools.

"Into the Abyss: Exploring the Shadows of the Darknet"

Summary: Dive into the world of the Darknet and the Onion network. Navigate the dark web, explore hidden services, and analyze the infrastructure and communication protocols used. Understand the security implications and ethical considerations of accessing the dark web.

"Shades of the Underground: Decoding Hacker Personas"

Summary: Gain a deeper understanding of different hacker types and their motivations. Explore White Hat, Black Hat, Grey Hat, Blue Hat, and Red Team hackers. Learn about the techniques, tactics, legal and ethical implications, and collaboration within the cybersecurity community.

"Malware Dissection: Decrypting the Digital Plague"

Summary: Study various categories of malware, including viruses, worms, Trojans, and ransomware. Learn behavior analysis, dynamic and static malware analysis techniques, and indicators of compromise. Explore malware analysis tools, infection vectors, and defense mechanisms.

"Toolsmith's Arsenal: Unleashing Power in Bits and Bytes"

Summary: Explore commonly used hacking tools and their functionalities, such as Metasploit, Nmap, and Wireshark. Discover scripting languages and frameworks for hacking purposes. Understand the legal, ethical, and responsible use of hacking tools and online resources.

"Infiltration Symphony: Dancing with Bits and Bytes"

Summary: Master advanced techniques for network intrusion, scanning, cracking, and exploitation. Learn about advanced scanning and enumeration techniques, password cracking, exploitation

frameworks, and post-exploitation tactics.

- More to be added as the course is refined

Free Member Trainee's Obligation: - Complete a agreed to contract for the training courses terms and conditions.

- Complete the course work in a timely manner and ask questions and be as open as possible with the lead instructors on what is unclear, or needs expansion in technical details. - Remember you are our Experimental students to ensure the course is created as robust and comprehensive As possible.

- Be active and preform the daily requirements for the course work.
- Submit all testing/quizes and Most importantly feedback forms for each section.

IMPORTANT NOTE

ANY Participants found to not be doing course work, not taking the course seriously, or otherwise trying to leech the course curriculum will either be removed from the course, and/or held liable for the Courses planned starting price of \$1500.

Agreement to this free course acknowledges you can and will be held liable for the full course costs if you are not taking this seriously.

Senior Members! If you have a natural gift for teaching people, find it easy to express complex technical terms in a simple easy to explain approach, and want to contribute to better higher education towards others, here is an opportunity to contribute your technical skill sets and ensure the next generations of Hackers and COMputer gurus dont start off on the wrong footing!

Benefits include the entire course content, as well as an opportunity to become a partner in ongoing training and courses going forward for a profit split.

Applicant Trainees Application Form:

Code [color=#9DF9FF][b]Alias / Nick Name:[/b][/color]

[color=#C3FFFF][b]Years of General COMputer Experience:[/b][/color]

[color=#C3FFFF][b]Years of Technical Computer Experience:[/b][/color]

[color=#C3FFFF][b]Reason/Motivation to want to take this course (1 paragraph):[/b][/color]

[color=#C3FFFF][b]Previous Experience, certifications, etc that should be known:[/b][/color]

[color=#C3FFFF][b]AMount of time to dedicate to the course (per week):[/b][/color]

[color=#C3FFFF][b]Portfolio / Demonstrated knowledge:[/b][/color] Provide any technical assets, posts, tutorials, websites or other accomplishments we should know about or take into consideration for your application. Senior Members: Post here or PM me to indicate your interest in contributing to this.

Best of luck to all, I will be updating this thread as needed.

Thanks i guess XD

Hahaha - June 4, 2023, 2:09 pm

At the moment I would describe myself as a digital adventurer ready for the next step. The months that I have been active on this forum I have gained basic knowledge, and I can say that I have become addicted to information related to hacking I am extremely motivated and have enough time to complete the course.

My post history may be disappointing, this is mainly because if I don't know or understand something. I dive into the database of forums to come up with the right information, if I really can't figure something out I try to ask a question as specifically as possible.

I would be the perfect candidate as I have a huge drive for hacking I will ask targeted questions thus not wasting anyone's time I will also participate in group discussions, I will complete the course 100% in the requested time period I will also complete all daily requirements.

shadowsodark - June 7, 2023, 8:39 am

I have been interested in cybersecurity/hacking lately its a huge field and I am really interested in it and I am sure I will be able to discuss and share my knowledge with the other members there

Motivation wise I think I am really motivated to start learning new stuff and I am always looking forward for that

I will make sure to be as active as possible and I will be submitting stuff as early as I can.

borealfoil409 - June 7, 2023, 9:43 am

I would love to be involved I just did Security+ course for college for 2 years but now I want to learn the technicalities and coding, etc. behind the malware and hacking concepts I've been learning about.

I appreciate the desire, but being this is your first literal post, I can't accept being I have nothing to show for you.

As for you my friend, I see 19 posts of leeching content, and you wish for me to openly hand my content to you being it is being developed as a paid for course.

I'm going to say, no, unless your dead serious, and willing to allow a Middle man to hold \$750 (50% of estimated course value) in trust to complete the course.

SO you decide how seriously you want to learn, and let me know.

The Security+ certification drained me \$390 no way jose

Dread.Reaper - June 13, 2023, 12:18 am

The fact it took you a week to see this and reply (To yourself?) indicates I made the correct choice here.

This kinda stuff takes dedication... Best of luck.

borealfoil409 - June 13, 2023, 12:20 pm

This kinda stuff takes dedication... Best of luck.

I'm spending my time wisely learning more as I go along my cyber security journey but I still support the cause. I just thought you were going to do this for free because I'd like a mentor to show me the way easier but I think learning should be about someone's passion and drive versus forking out half a thousand dollars to maybe or maybe not learn. I can't put on my resume "learned from Hackforums.net" but I can put on it the technical skills I'd be learning from you and how I'm applying them to real world scenarios. Best of luck though to you if you decide to have a change of heart or mind I'm just a PM away. :)

Ph4n70M Phr34K - June 16, 2023, 6:27 am

Good to see people trying to give back HF its glory.

@People who are reading this post: remember that it is YOU who can make HF great again.

Sand Ferret - June 16, 2023, 8:46 am

I'm surprised more people haven't jumped at this opportunity.

OFFICIAL MANELE MUSIC - June 16, 2023, 10:19 am

Although my profile is not great, I am capable of presenting my previous work in PMS. I have established myself as a web developer with several years of experience, specializing in Angular, Vue, Express, Electron, and Flutter. Throughout my career, I have successfully developed

numerous websites, with a particular focus on single-page applications (SPAs), as well as desktop and mobile applications. I hope we can talk in private and provide more details there.
