Thread: [How to spoof email fast and easy](#)

SIM-5355723 - June 7, 2023, 5:28 am

My first tutorial,

This is very easy to do. Steps:

Open website emkei.cz

You will see bunch of input fields. (It will look like basic email client) YOU DON'T NEED TO FILL ALL FIELDS! Only first fields and content

Click send. You are all done! Works 60%

Did you test this to see if it works? I just tried doing it on one of my VMs with a burner email out of curiosity and the burner email did not receive anything. I filled in the From Name, From E-Mail, To, Subject, and Content sections. I also checked the spam folder just to make sure it didn't get sent there.

Surprisingly, it's working properly lol

Emails will go to spam folder but it does what it says.

doesnt work i tried it 3 times doesnt send to gmail

bradfordrd021 - February 19, 2024, 3:54 am

does not work i tried it twice

KellyMathers - February 19, 2024, 5:35 pm

Enkei is very old.. it worked around 2020-2021 briefly, but it depends on the webshells attached.

Also any mail provider with an SPF check will kill ur mail.

cam667 - *October 27, 2024, 8:02 pm*

nop bro it detect by mail provider

Sickedrat - *March 13, 2025, 9:54 am*

nice post I'll try and update
