Type's Frontend/Backend Services
About Me:

Hi my name is type! My passions are web3 and automation. I was first introduced to automation and the power behind it through using sneaker bots to resell hyped sneakers. These sneaker bots are what influenced me to dive into coding as I always wanted to understand the technology behind the software. Subsequently I was introduced to web3, NFTs, Ethereum and other crypto related topics. I developed a fascination with Solidity and the technology behind Ethereum.

Languages/Frameworks:
HTML/CSS/JS/Typescript

React/Chakra-UI/NextJS/Redux

NodeJS

Rust

Solidity

MongoDB/Postgres

Tauri

Other Non-Coding Software I am Experienced With:
Adobe Premiere Pro/Photoshop/After Effects
Sony Vegas
Figma

I am looking for any kind of coding/tech work and I can also help with AWS/firebase/domain/server setup/security/etc. I am often able to deliver frontend (HTML/JS/CSS) work same day!

The price rates and project duration will vary project to project. Pm me or add me on discord/tele :
