Thread: [Want help with making Unity JP6 apps appear functional](#)

**RageAngel** - June 26, 2023, 9:50 pm

Fla. DOC officers are getting better at identifying rooted tablets.!Especially now that we have come across Droid VPN. How I'm communicating now.

The main problem we're having is that most of the breaks, if not all, are complete reflashes and no longer contain any official info.

Tue secondary issue is the new versions (with .sv) apps, often require inmates to be online before the app will work and to display their name and dc#

this is my new plan. Can anyone help?

Hit me up. DM for TG.

**Joe Smith** - July 6, 2023, 9:11 pm

So I have the zip files with the unity platform break with beastmode. But the instructions for using the break isn't clear and I'm new to all this. I have the following zip files....

Flashcfg\_unity\_gold.zip

Unity\_gold\_v-blue.zip

Hexaflash apk

And beastmode.....

I got the whole turning the brom mode on thing but am not familiar with the install after that. As I said the instructions aren't clear.

Further, I have an extra unity tablet. Buuuut the problem with the tablet is that they green screened the thing and its no longer provisioned. So even if I do root the tablet and do installs, I don't know if I can even get into the thing.

Is there ANYONE who is willing to help a fellow convict out with talking me through all this??? I've got an OTG double micro cable, a way to open brom, etc. I just need help with the install and getting past this green screen.

I'm working on getting telegram set up again in the meantime all I've got is an email add.....

Help please..

I am looking for updates to the beastmode break. I need the new accessories app, the pando app, and the the new system UI- v8.3.0 ? Also I need to know if there are any updates that can make any of the disabled securus apps work ? Hit me up.
