Are any of these alt coins decent projects right now? Anything worth dropping a few grand into that could give good returns? Currently have bags full of BCH and LTC and looking into alts right now.

Polygon is a solid investment in my opinion.

I don't have any particular reason to say why Polygon is a good investment, but from the coins he shared it's the one I'd throw money into.

I would just throw what you have to invest into BTC but that's me.

If I were to suggest keeping an eye on any of those cryptos; Polygon (MATIC) would be the one I keep track of for sure. [aota](#)
