Thread: [Xmr botnet mining with proxy](#)

Qwetser - July 4, 2023, 4:56 am

Lets say I have 50 miners mining xmr, should they mine directly to the pool or should I use a proxy like xmrig-proxy? Does a pool have some kind of limit to how much can different miners around the world mine for one address?

Lolol538 - October 2, 2023, 10:50 am

hell ya! exactly what i was looking for! time to make some cheddar

no3kah - October 28, 2023, 7:45 am

for me long way to go to proxy then :D :D still struggling with 10 user

yuulii - January 9, 2024, 9:22 am

hey guys, I have access to over 1000+ computers now. I need someone who has experience and knowledge in order to easily install an undetected script on these computers please let me know. Other tips are also welcome

In short words you need to have:

- mining malware(PureMiner and UnamMiner are two which are popular)
- crypter(nowadays only private, manual crypts are a viable option)
- a lot of time, money and effort.
- knowledge how to spread and get bots that have dedicated GPU

This is pretty much it. However it would take you a giant amount of time and effort to learn how to run and manage botnets, spreading campaigns and all the stuff around it. You would need to a lot of time, money and dedication to it before you could actually see any revenue.

Lawrence Peckon - January 29, 2024, 4:22 pm

20 devices and I would reprivate the network you are mining on for the next 20.

can't you mine using a CPU?

also, does anyone know how efficient mining on older android devices would be? got a bunch of

spare phones and haven't tried it out yet.

Depends on the coin.

Mining on gpu is just much more efficient

Just no. Phones doesn't have enough computing power to make it work lol
