Thread: [What's your home internet speeds vs phone speeds?](#)

-PUBG- - July 9, 2023, 5:47 pm

Just curious what everyone gets speed wise on home internet as well as there phone

Here is my cell phones 5G speeds from inside my home. I am using T-mobile for this.

Here is my home connection, using spectrum 1GBps plan (for some reason my phone decided to connect to the wifi mesh system which makes it not use wifi 6 and slows my connection)

Just curious what everyone else gets? :)

Julius Seizure - July 9, 2023, 7:09 pm

mine is 5mbps on my phone and 300mbps at home

(Jul 9, 2023 08:15 PM)phantomman55 Wrote: [\[CITE\]](#) I have at least 800gbs upload and download thru fiber optic lines. My phone gets only about 500mbps on home wifi.

Why do you ask? Most of the U.S.A internet providers are shit. I have my own lines.
Just curious to see what others get

spiral - July 10, 2023, 3:08 am

my 5g is much faster than home broadband, if I want to download something fast I just use my hotspot lol

ChronoBiff - July 17, 2023, 8:15 am

I typically get anywhere from 800+Mbps with Google Fiber. That number drops slightly when I am connected to my VPN. Yes, T-Mobile seems to be rather fast. I'm really glad I got my cell plan price locked. I can only see things getting more expensive due to the economy and inflation.

Stunner - July 17, 2023, 1:03 pm

Mine is pretty average in UK

I know a lot of places that would love to have these speeds. I'm sad to say it still exists in rural America.

diamondcf - July 17, 2023, 8:00 pm

both are around 100Mbps

That's pretty good. As long as you have at least 25mbps, that will fulfill most needs. I say most loosely as every situation is different.
