It is not 100% FUD for all Antiviruses but it is bypassing Windows Defender Runtime and Scantime which is most important for this project. Working on improvement daily. Soon I will upload some Runtime Scan.

Good morning sir,

can you encrypt all kinds of RATs, even older ones like njRAT or darkcomet?

if not can you make an exact list of RATs that you can encrypt? ?

your crypter can be used on windows 7, 8 and 10, 11?

linux and macintosh??

on the other hand, how to do business safely when you see the article below?

Yes. All RATs and tools compatible.

Yes, crypter output can be used on any Windows version, no dependencies.

Will not work on linux or macOS because output file is .bat and mostly users are encrypting .exe, .vbs or .bat itself.

So crypter is working like this:

detected.exe ---> fud.bat

detected.vbs ---> fud.bat

detected.bat ---> fud.bat

As for the article you sent, you should contact site administrator or staff. I'm just user/seller here. ?

OK thanks for your answer

there are not many customer reviews yet, initially to avoid losing too much money, is it possible to try your product for free? I prefer to be honest with you and tell you this way?

it's only temporary if all goes well I'll come back to buy you other services be sure

once encrypted I will throw the corrupted file on the web to see if there are any returns then I will

keep you informed of the rest

do you only sell here?

Marketplace Violations Rules List:

1. Vouch Begging - Do not ask for a Vouch Copy unless the OP explicitly offers it.

Read my thread again, I stated "Don't ask for tests and vouch copies". I will not report you, but be careful.

Hey, this project seems very cool.

Does the Batch file require Admin?

If yes to this ^^:

does this add exclusions or bypass in another way?

Is the batch file obfuscated with the random Chinese characters? (This type of obfuscation can easily be deobfuscated)

Thank you.

Admin is not required, but UAC can be added so file will be executed with Administrator privileges silently.

Bypass is done by encryption chain, exclusions can be added and we use that oftenly just in case.

No Chinese obfuscation characters.

Thanks for answering, i made a crypter just like it but mine is unoptimized and pretty bad. you just explained to me that you know what your doing and thats enough proof so you sound legit, this is a very cool project . Good Luck!

I've been spreading the encrypted file for a week now and it's still 0/26 detection (avcheck.net/id/MpuTOqhUdRXc) I'm really satisfied.

For this price getting private light weight stub like this...fantastic experience.

I got file back in like one hour, so this service is really really fast for a private crypt, AMAZING.

Summary:

- Very fast delivery
- Scantime FUD
- Runtime FUD - WD 10000000%, tested.

Overall: 10/10

Looking forward to work with you again.

Thanks for this! Contact me anytime! ?

\$795 per month would be a little steep for me. any chance we can work on that?

I don't plan to mass spread, just have some high profile targets :)

Would need smart screen bypass

Can you assist? and at what price?

Thank you

Are you selling crypter or you are doing crypting service.

i want to crypt my # file

We have various products. We offer a crypting service. One thing to keep in mind: classic crypters are public stub generators, and they usually become saturated after some time. Because of that, they may not stay effective for long.

I'm Stanley HF's helper bot. The OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.
