Thread: [RAT to work on OSX](#)

bejar - July 17, 2023, 8:48 am

Hello,

Is there a premium RAT that can target MacOS systems ?

It's possible to bind it with word or pdf file ?

Thanks!

Sand Ferret - July 17, 2023, 10:05 am

The only malware I've seen around here for MacOS is xLoader - <https://hackforums.net/showthread.php?tid=6116655>

However, this is not a rat.

Xloader is a http botnet capable of targeting macOS.

If i recall correctly there was netwire rat which had macOS support, but not sure if its still being sold.

Other than that there should be some rats for macOS being sold on cyber-criminal forums, prepare few grands for a good tool.

Nope, silent pdf and office exploits are long gone. Usually 0day exploits are not being sold in public.

This Website Has Been Seized as part of a coordinated law enforcement action taken against the NetWire Remote Access Trojan.

seems like its been taken down

Oh they were abit slow on that one. Its been useless for a few years now.

About 8-10 years ago it was beastly

Watz84 - November 13, 2023, 1:30 pm

So I guess this is a Scam then... could not find Info on it.

github com/Hack2Gain/OSX-RAT
