Github, Unknowncheats,Discord.

You can find updated cheats on Unknowncheats & Github but even with Bypass VAC you won't have anything undetectable for long in public, nevertheless very interesting on GitHub&Unknown for code sources and understand how it works before making a serious purchase for a private one.

Won't get anything UD for free, but you can find a bunch of publics that are very close or are completely undetected for less then \$40 per month.

Edit; Would personally recc skeet (gamesense.pub) if you can get an invite. Best cs cheat known to man.
