Thread: [How can I block the front camera of your phone?](#)

reptilano - July 26, 2023, 12:49 am

When it comes to KYC verification on the phone, it will automatically detect the front camera to focus your face.

Is there any app or configuration to block the front screen camera of an android device and only show the back camera?

DramaKing - July 26, 2023, 8:08 pm

I don't know of a way to switch camera ID's, but how do you intend to pass verification with the back camera?

That runs on Android? Well, if you can't set DFL to use the front camera, blocking it wouldn't be enough. If [this](#) allows individual camera control, it might work.
