Thread: [Domain Pure miner/loader](#)

Tajas - July 29, 2023, 11:35 pm

Hi i have this 2 programs running with IP of vps i need to connect the builder to a domain or something, can anyone explain how i can do that?because crazyrdp going Change my IP tomorrow :(

Sand Ferret - July 30, 2023, 3:49 am

What part are you struggling with?

Buy a domain, point it to your VPS IP, create new stub with domain and update your clients.

Then when your VPS IP changes, you just need to point your domain to the new IP.

I'd imagine a few people are shitting themselves with crazyRDP changing their IPs.

Let's use logic here, did you build the stub with IP? If so, why would your website / domain work?

Yes I build my stub with my vps crazyrdp IP

What i can do now for not loose all my bots

So I need to buy/ create a domain like "mybots.com" right? I can buy the cheapest on the market or i need a Bulletproof or something like that?

osn64698 - July 30, 2023, 7:54 am

The minute you lose the IP, bots will go bye-bye.

As-long as you control it, create a new stub that points to the domain, crypt it and execute it.

With 100 bots it does not matter, nobody will give a fuck about your bots, but if you plan to make your bot a lot bigger, go for bullet proof providers.

You have examples? Of domains?

Sand Ferret - July 30, 2023, 9:52 am

Go with a bulletproof host, future proof your setup.

Some examples below which I've copied and pasted from another member:

bpw.sc
njal.la
tonic.to
flokinet.is
r01.ru
nic.ru
isnic.is

Tajas - July 30, 2023, 10:56 am

I was bought a domain on njal.la. how i can point to my IP? I add my older IP crazyrdp?

I have bought a domain now i have a domain and pointed it to my IP from the crazyrdp and build the files with domain, Im doing right? Tomorrow my vps gonna Change IP

It sounds right from what you're saying.

Build your stub with your new domain, crypt it then update all your clients BEFORE your IP changes.

Tajas - July 30, 2023, 11:35 am

But in theory the IP from vps Im using now its connected to my to my domain, why i need to crypt again my file and update? Tomorrow my vps IP Change i need to connect to my domain again no?
