Thread: [ByteCrypter with DarkVision](#)

grilledservices - August 4, 2023, 6:05 pm

Hey everyone.

Attempting to crypt a DarkVision stub with BiteCrypter, but always seems to break the file. Has anyone got this to work? I believe it's coming down to me choosing the wrong file compatibility, which I don't completely understand TBH.

These are the available options. Anyone who's got it to work or has some input please let me know!

(Have been talking back and forth with the dev, but I think we have a large time difference and it makes having a conversation hard)

(Aug 4, 2023 06:26 PM)Dyne Wrote: [\[CITE\]](#) Is someone else gonna tell him? or should I?

Don't use shared stub crypters. You get what you pay for, especially in this regard.

EDIT:

Also,

keep in mind You should have no settings enabled on your stub, (startup/persistence modules), Know the difference between a native stub (DarkVision) and .net managed, finally Self injection protocols.

Yep, that's what I've learnt :(Is creating my own too hard?

picpic - August 5, 2023, 1:47 am

ByteCrypter ? Seriously ? Getting bots in 2023 with this thing would be a miracle you're wasting your time !

- Good crypters are expensive and are updated every day ! If you can't afford them, check privat crypting services (search for RAZ for exemple) , and If they can't encrypt your file, they'll tell you.

- See also more advanced methods than just a .exe to run, using .lnk technique is a good start ;)

I have checked it with many different malware and could not get it to work with anything.

You can check out my results in the following thread -

I tested all possible combinations.

In short you are being social engineered.

If you read the thread i linked you will understand that you wasting your time.

Crypting is really the only thing i'm struggling with. Every other aspect of my operation is running perfect.

Live and learn ig ?. Might just have to invest my time in learning to code my own, seems like the most viable option ATM. I have payed one person to crypt my stub, he did a good job making it FUD but the file broke. He says he's building me another one though so i'll just have to see how it goes ig. I had one reputable guy dm me, so will probably just hoard some crypto then go through him.

Seems like loadman is now also doing the same good job and cheap too(50\$). Im a bit surprised people doesn't abuse them lmao.

Those are prices for single crypts.
Shared, subscription based crypters are not really a viable option nowadays.

Perfect, will definitely look into them. Does anyone offer a private crypting software? Or a mentor package on how to crypt your own files?

Thank you, will do.

osn64698 - August 7, 2023, 8:28 am

I highly recommend loadman / RAZ.
Do not even hesitate.
