Thread: [How to find the e-mail address of a social media user through OSINT?](#)

burcev44 - August 9, 2023, 10:10 am

I want to find out his phone number, e-mail address or real name for later phishing attacks.

The person uses: Tumblr, Twitch, Blogger, Discord, Steam, Reddit, Pinterest, Youtube, Instagram and Twitter.

I know his usernames on all these sites. Please help.

For example, you could try and act as a company or marketing agency on Instagram where you're looking for people with organic following to "promote your product".

DM the person with an offer and ask for their email or phone number.

Good luck

Search through databreach registries, indexing every username you know.

Contact me on-site if you need help.

I suggest learning about Google Dorks. The OSINT Framework site is also a great resource!

Google Dorks basics:

<https://www.techtarget.com/whatis/definition/Google-dork-query>

OSINT Framework:

<https://osintframework.com/>
