Discord Remote Access Trojan (RAT)

This is a full fledged tutorial on how to create a Remote Access Trojan (RAT) on discord and being able to run it from there.

note that I would advise this to be run on a VM, but it's your call.

Here,?

With all of that to consider, it's no wonder that you might hit a bit of writer's block when you put pen to paper. Don't fret. Sending a thank you card is simple. If you're stumped on what to say, we're here to help. No matter the occasion, from birthday thank you notes to wedding thank you card wording, here is what to say to express your appreciation.

(Feb 4, 2024 01:06 PM)Popular Wrote: [\[CITE\]](#) Anyone verify that this still works?

probably. token logging still is a thing but session tokens became one-time use sometime around 2021-22. doubt it's anything like a zero click or whatever but you can easily SE anyone into running some sort of logger on there, I did it for years with my own logger I wrote back in high school. haven't opened OP's attachment but you could find plenty of fully functioning rats like this on github

skibidi123 - February 4, 2024, 6:35 pm

Do I have to exit all servers? Not that I have that many. I don't understand Discord very well?

waiting for your answer. If you make a video guide it will help more
10. Create a server and delete every channel except #general.

RAT with c2c through discord is not recommended since it isnt hidden nor viable, discord can easily view what your doing and nothing is good with it except that its easily accessible
