How many instagram groups, Telegram groups or accounts you need spammed, has to have active members in group, and admins. But i can Ban or spoof, or spam .jpeg, .pic files as well as text and spam calls etc.

It was offered here I think seller is still active, next on my list is developing a bot like that.

How many you need? Our panel we have Telegram accounts, no sms needed bypass that, you can make the comments yourself and change picture/name, and quit telegram, repeat. Slower process but you in control and this would be cheaper by a lot. PM if interested.

But I think the seller was active, I was asking about his project code.

I currently have a script that fits your description.

Hit me up if you're still up for this task.

My script currently uses 40 numbers to send messages (delay inbtwn each message). It's automated so even if a number gets deleted, the script continues to run and bypasses that number.
