Thread: [Coding learning help](#)

**segudy** - August 16, 2023, 3:31 pm

I started learning python and I get all the concepts and Syntax but I dont know how to exercise coding.

I dont get any coding ideas!

Please share some ideas. This would be very helpful!

A great method for learning is to plan a small project and fully implement it. Based on my experience, completing a project before starting a new one tends to be more beneficial for learning. It's difficult to suggest any ideas without knowing what interests you the most.

A few ideas that I did when learning python:

Selenium scripts for automating web tasks.

PyAutoGui Scripts to automate tedious tasks in video games.

Those are just 2 of hundreds of things you can code with Python, you have to pick what you like!

Find out what you want to code then use the libraries needed.

One thing that is somewhat accessible and gets your hands dirty is learning basic encryption algorithms and sorting methods.

Otherwise, pygame can be a good place to start with basic little games that you can replicate...

As others have mentioned, it really depends on what idea is going to drive you, once you find that you won't have a hard time coming up with things to do.
