Thread: [good dictionaries for wpa2 crack](#)

nefa22889 - August 23, 2023, 2:22 am

Hello guys today i was trying to hack my own wifi modem to learn aircrack-ng on my kali linux, i wanted to know if there are any good dictionaries for factory passwords of the most used internet provider or some other methods to crack them.

i'm sorry if u'll find my question pretty stupid but i'm a beginner, i just want to know from some experienced cracker as much information as possible about cracking wpa2.
?

You need this: <https://github.com/3mrgnc3/Router> Keyspace Wordlists. What you don't need is to use aircrack-ng to crack passwords. I assume that whatever guide you're following is several years old. Do you have a GPU?

Oh, and there's a separate forum for WiFi hacking.

Hey thank you for ur reply i took a look to the wordlist and is really good!
yes i have a GPU on my pc, it go faster if u load the dictionary atk on it or just depend on what hardware we're talking about?Because my GPU is pretty old is a nvidia 1050 2GB

You'll probably get memory errors, although it will probably depend on size of hashes / wordlist / attack mode.
