GLWS and maintenance.

Webshells?

Thanks you, and no, we don't use webshells.

I'm using a method I created, and all servers are created by me.

Yep. Just make a contract.

Malwhere? - September 10, 2023, 7:56 am

Works well - whitepearl worked with me and helped me solve why my emails were going into spam.

Thanks again!

A++

Fantastic software! Just tested it out, whitepearl was nice enough to give me a trial.

Review:

The software is only 2.1mb in size, and works very fast. I've tested it on multiple emails.

Pros:

Can send out thousands of emails very quickly

Easy to use

Great Spoofing of Emails (Looks great)

Can set Sent from

Can use HTML Templates, works great.

Super cheap, and budget worth every cent!

Fast customer support response.

Upto 30mb Attachment can be added to emails!

Cons:

Some Characters are not recognised like £ signs.

Can't use Syntax to have First name or Last Name in the email or subject

Emails go into Inbox and then go into Spam

Need to install own pixel tracking into HTML Template.

Conclusion*POSITIVE*:

This software is worth every penny, compared to Google G-suite which bans your account for a small number of emails being sent using Gmass. Also MailChimp charging more than 100\$/month to use them. I would totally recommend purchasing this if you want to do mass bulk emails. This is super cheap for what you get compared to all other providers! I recommend 5*!
