Interested. What was the alternative that you went with, just curious?

Also, how long is the license?

I went with Stand mod menu which is 30 bucks and its a good one so far, as for this one, so far i did not see anyone complaining about getting banned. And in launcher it shows the last update and detection status

Yes sir it works both online and story mode, you can check the video

Unfortunately I don't have the time to play video games much nowadays but I've made my network of close friends that play aware of the sale and will let you know if they're interested.

If you haven't already and don't mind, please send me your discord. Would love to have general conversations on modding as I've been out of the scene since the 360 flash/JTAG/Se7ensins days, haha.

Thanks!
