Thread: [\[ISSUES\] SQLi Dumper SLOW Dumping of Database](#)

RonyKingSourcing - September 2, 2023, 1:46 am

I do not know if anyone have that issue or it is only me.

It is often a nightmare dumping a database table using an sqli dumper.

I do not know if the issue is my own or if anyone here too are having same, and if there is any solution.

I will appreciate you guys responses.

I have read a bit here. I see some peeps use sqlmap, but i want to ask if database table can download faster in sqlmap?

I will appreciate your kind response.

Most probably is the type of SQLi, so changing tools won't really help. Try SQLmap, but most probably there won't be any difference

Depends on the connection to the server. The type of injection also plays a role. Slow - time-based, OOB - dns exfiltration via collaborator. You can increase speed by using threads as an option. In sqlmap parameter --threads
