Thread: [Script or Program to close a Windows box message automatically](#)

aerohacker - September 11, 2023, 2:36 pm

I'm using a software that expired after 30 days but that continues to work perfectly, the "problem" is that when Windows starts the software displays two Windows messages: One warning that the program has expired and another for me to put the serial code, I close both and the windows don't displays anymore.

Is there a script or software that detect and close these messages automatically when Windows starts?

You can use EnumWindowsProc to get the window handle and close all of them using SendMessage when your computer starts.

EnumWindowsProc =

[https://learn.microsoft.com/en-us/previous-versions/windows/desktop/legacy/ms633498\(v=vs.85\)](https://learn.microsoft.com/en-us/previous-versions/windows/desktop/legacy/ms633498(v=vs.85))

SendMessage =

<https://learn.microsoft.com/en-us/windows/win32/api/winuser/nf-winuser-sendmessage>

You can use ps/bat/vbs/pu script that runs on startup and kills off these message boxes

What would be the code to do that?

I don't want to kill the program process because that would terminate the program too, I just want a way to autoclick or close the messages automatically when Windows starts.
