Thread: [Good open source loader?](#)

elpasohacer - September 17, 2023, 2:08 pm

Is there any actual good open source loader that connects via Tor?

BIOS - September 17, 2023, 3:09 pm

You can take a look at Gaudox / BlackNET they're both open source, except for the Gaudox builder.

These do not connect via tor or a secure way that will not lose them.

Yeah, those are both awful, true. I've set up BlackNET for fun in the past and can confirm it's complete trash.

What do you recommend and what would you say is a good form of communication for server in client where the server wont get instantly compromised?

Depends on how many bots your holding, I never had problems with HTTP/HTTPS.

Let's say this number is around 1K-50K, is https good? If so, what loader would you recommend?

There is none. Good malware is mostly being sold on cybercriminal forums but is rarely open-source.

Your c&c would eventually get exposed sooner or later. You won't avoid that in the long run.

Smoke / amadey / blueloader are popular names of botnets being sold in public and for cheap.

1K - 50K online at all times? If yes, I would recommend you do good research before buying anything.
