Thread: [Creating \(Direct Download Link\) <a href>](#)

-DarkByDesign- - September 25, 2023, 6:38 am

Hi all,

I've been looking online, and creating download links seem to always take me to do something with Google Drive.

I was wondering if you know how [<a href>](#) Tags for link can be used to add a link that will download immediately.

I wanted to have a (button) you click on a HTML template, that will download a file immediately rather than going to like a third-party place to download that said file.

Direct Download Link is what i'm looking for, any knowledge would be very much appreciated.
Thank you

You create a hyperlink directly to a file.

-DarkByDesign- - September 25, 2023, 7:20 am

Hi Drama,

Do you know where you can upload said file? Thanks

Something like this:

Code `<a href="manual.pdf" download="manual.pdf">Click here to download manual</a>`
Just replace "manual.pdf" with your path and filename.

The download attribute is fairly new and not required.
