Thread: [which de-obfuscation tools you recommend?](#)

ækhack - September 26, 2023, 5:36 am

Hi

I would need your assistance in obtaining the source code of this DLL file; however, it is strongly protected. It's important to note that this file is original <https://we.tl/t-zHquXF9shJ>

, and the cracked version is already available on the internet.

Before it gets cracked, there is a 7-day trial period, and activation is done through email and a token. Renewing the trial by changing the email address is impossible because it uses a machine ID, and even with spoofing, it doesn't work.

I would like to know which de-obfuscation tools you recommend. Currently, I am using dnSpy to attempt to obtain the source code.

Thank you in advance for your help

If you are using DnSpy then you must know what Obfuscator It Is using already.

I understand, but I am looking for tools to decrypt the file.

I found a video on YouTube that explains how to do this, but unfortunately, those tools are not available. I would like to know alternative programs that can perform this task
