Thread: [Hunt3r Telegram Group Scraper | Max 10 | Fast With Simple UI | \\$34.99| 24/7 Support](#)

Hunt3R09 - September 26, 2023, 3:55 pm

Introducing a revolutionary Python script , designed to empower Telegram group administrators and marketers! This tool is a game-changer, enabling the scraping of user data from specified Telegram groups with unparalleled ease and efficiency. With a user-friendly graphical interface, inputting API credentials, phone number, and group names has never been more straightforward.

Imagine having access to detailed user data, including username, user ID, bot status, last seen, and account creation date, all saved in organized CSV files. This invaluable information allows you to analyze user behavior, identify active and potential customers, and tailor your marketing strategies to achieve maximum impact.

But that's not all! Our tool provides real-time status updates and progress tracking, ensuring you are always in control and informed. Any errors or issues, such as account bans, are promptly communicated, allowing for immediate resolution.

Don't miss the opportunity to elevate your marketing game! With our innovative tool, make data-driven decisions and optimize your targeted marketing efforts. Join the future of Telegram marketing and experience the difference that actionable insights can make!

Features:

User-Friendly Interface: The tool features a graphical user interface , making it incredibly user-friendly and easy to input necessary credentials and group names.

Data Scraping Capabilities: Leveraging the Telethon library, the tool can efficiently scrape detailed user data from specified Telegram groups, including username, user ID, bot status, last seen, and account creation date.

CSV File Export: The scraped data is systematically organized and exported to CSV files, facilitating easy analysis and utilization for marketing strategies.

Real-Time Status Updates: Users are kept informed with real-time status updates and progress tracking, ensuring transparency and control throughout the data scraping process.

Error Notification: The tool is equipped with robust error handling, promptly notifying users of any issues or account bans, allowing for immediate action.

Group Name File Loading: Enhancing usability, the tool allows users to load multiple group names from a file, streamlining the data scraping process for multiple groups.
