(Dec 15, 2023 01:41 PM)mizza9 Wrote: [\[CITE\]](#) Does this inbox hotmail, office365? also does it allow spoofing?

Our SMTP has zero inbox rate to hotmail and less than 60% inbox rate to Office 365.

It isn't because SMTP is bad. It's all Microsoft safety policy to only inbox email affiliated with them.

Gmail and other general domains have no issues and have higher inbox rate.

Spoofing Email and User ID is not restricted by us, but we do not recommend email spoofing if you want to have a better result.

It's best you spoof User ID alone instead.

Hope we answered all your questions.

I'm interested in the inbox rate, these days it's hard to achieve even a 1% inbox rate with a 100 senderscore smtp..

Thanks

There're factors that can reduce your inbox rate starting with not just newsletters but also using same keyword subject on all your outgoing newsletters.

To answer your question, our inbox rate goes from 50% up to 95% depending on domain receive and email provider.

Note: This is exception to hotmail

1. we do not offer warmup service to external smtp users.
2. our IP's are reputable enough
3. We do not use PMTA or any automated tools to build our smtps, all smtps a built from scratch by us to ensure efficiency. (We could also build pmta smtps based on customer demand)

How do you rotate your SMTP IPs without PTMA? Sounds fishy as an SMTP server setup expert

(Jul 10, 2024 05:09 PM)dmitriblov Wrote: [\[CITE\]](#) How do you rotate your SMTP IPs without PTMA? Sounds fishy as an SMTP server setup expert

Thanks for the question

First rotation of multiple IP's shouldn't be fishy just because it wasn't built with PTMA.

Compared to PTMA we build SMTP from scratch for each individually, evaluating every bug and making patch update to fix that as tech around SMTP evolves.

Reason why we take 12h - 48h to deliver order.

Not to mention we charge less than a fraction of it's price for our service.

PTMA was designed for auto installation with it's last update made around 2019.

Hope you found brief explanation helpful.

Other reason we don't use PTMA we prefer keeping to ourselves.

Note: we could build PTMA SMTP on order if you want.

I contacted the seller in question on telegram. Initially I told him that I needed a smtp server for mass mailing to such services as mail.ru, yandex.ru, bk.ru and other Russian services. To what I was told by this seller that the yield is 100%, but the yield in the inbox is equal to 75-95%. I was not embarrassed by this, I paid him 45 bucks, after I received smtp server. But on Russian mailboxes this smtp server does not deliver letters neither to spam, nor to inboxes. -rep to this seller

Hello,

Our SMTP hit 70% - 95% inbox on must domain including Gmail.

Had no idea targeted sector had currently restricted us. Apologise i had to rest up after lots of order delivery.

It is important to factor we delivered SMTP as promised compared to others who you said blocked you after purchase.

This is not correct. I bought this smtp after about 300 emails sent it stopped. I contacted the seller he told me that it will be 300 per hr. my next trial after more than 3 hrs i attempted again after like 154 emails it stopped sending.
Please let us try to be truthful for any product advertise. Do not deceive ppl with false product info.

Please stop miss information

First you skip the part SMTP hit's inboxes and delivers properly with ease and you wasn't scammed. Secondly SMTP plan you purchase has a limiter so you can send max 3500/daily to avoid breaking this rule a restriction is put in place. which automatically allows you to send 150 -300 per hour.

If think our SMTP is high quality as we mentioned you can upgrade to higher plan with no limitations.

Thanks for your understanding

Always state it this way as u mentoned regards to hourly plan not daily. AFter every 1 hr you come back to send again thats my point. In your advert you did not give details that the quota is hourly. out of 3500 daily plan i will have to send 150 every hr. Normal webmail can do this nothing special about your product.

No way i will deliver SMTP without testing properly.

I don't control or monitor what you use SMTP for after delivery.

I think it's best to start keep photo and record proof before delivering like i did in the past.

It's been over 24 hours since I've been waiting for your response, don't try to get away from me, you have two options: either you fix this mistake which is caused by your configured SMTP server or you refund my money. I already provided you with a detailed info on TG where it is clearly visible that the Mail delivery failed message is from also Yahoo, that text I got with using Plan text even without HTML mass email sendings. Waiting for your reply on telegram
