Thread: [Java Dropper V1 | JavaScript | HTML CODE | \\$45.00 USD | AUTO-DOWNLOADER](#)

Loot™ - September 29, 2023, 4:10 pm

Java Dropper V1

So, to clarify, the code is written in JavaScript and doesn't rely on Java or Java applets. It works in a standard web browser environment.

It should work on most modern browsers, including Chrome, Firefox, Safari, and Edge.

A "Java auto downloader" typically refers to a software or program written in the Java programming language that is designed to automatically download files or resources from the internet. This could be used for a variety of purposes, such as updating software, fetching resources for an application, or any other task that involves retrieving data from the web.

*Java is a versatile programming language that can be used for a wide range of applications, including web scraping, file downloading, and automation tasks. Java's ability to work with network protocols and its rich set of libraries make it well-suited for tasks involving internet communication.

*Keep in mind that while Java can be used for legitimate purposes like software updates or fetching resources for applications, it can also be used for activities that may infringe on copyright or privacy laws. Always ensure that any use of Java for downloading complies with legal and ethical standards.

*This code will allow your landing pages to auto download.

*Cross Platform!

*Easy to use!

(Screen shot of the URL with downloader attached. FUD WITH .PDF EXPLOIT)

Which versions of Java does this work for?

Is this a traditional applet or is it silent (depending on Java versions)?

Loot™ - September 29, 2023, 5:27 pm

Is this a traditional applet or is it silent (depending on Java versions)?

It doesn't involve Java applets at all. Java applets are a technology that was used in the past to run Java applications within a web browser. However, modern browsers have largely deprecated or removed support for Java applets due to security concerns.

Thank you sir! Have a great weekend!

Lefty - September 29, 2023, 10:50 pm

How would this compare to a traditional drive-by? Whats the amount of user interaction and are there are detections at the minute?

You can PM me privately if you like.

GLWS bro ?

Isn't it a bit misleading to use the name Java if the technology that you've used was Javascript?
Thank you.

Javascript is in the post subject? JavaDropper V1 is the name of the script.

GLWS bro ?

I have not tested with a malware so Im not sure of detections. If the malware was FUD, It would be yes. Please view the video to see how the script works. You add the script into your html code, when you load the site it will download. Simple as that.

Root Joy - October 1, 2023, 12:53 am

Interesting do u have telegram?

Loot™ - October 1, 2023, 6:12 am

(Oct 1, 2023 12:53 AM)Root Joy Wrote: [\[CITE\]](#) Interesting do u have telegram?

No, if you want to buy open contact. Ill pm you the source after purchase.

Root Joy - October 1, 2023, 12:17 pm

The video u showed here is just showing that you can download it.

My question is this, does it exclude windows defender?

Virus have to be crypted?

Does it work with virus with icon?

Just want to be sure what I am paying for?

Loot™ - October 1, 2023, 12:54 pm

If a malware was to be used, it would need encryption. This script will not execute on client end user. Only download.

Loot™ - October 5, 2023, 2:26 pm

I cant update the thread anymore, however this is now on sale for \$30.00 USD PM me today!

kmsroot1337 - October 30, 2023, 7:41 am

So from what I can see in the video the script only downloads a PDF and thats it?

Or is the PDF run in the background automatically? If so, is the PDF exploit included or do I need to get that seperate?

You did not really explain very well how the dropper actually functions.

SIM-5481312 - February 12, 2024, 10:34 pm

Is this still working or not

kosala samarasinghe - May 21, 2024, 8:12 pm

hey can i see the video of java dropper is it working still ?
