Thread: [Got Permission to Hack My School](#)

the_onlooker - September 30, 2023, 1:17 pm

Hello All,

I have experience with HTML, CSS, JS, and Python, and my schools Tech lead has said I can hack the school's website as long as I report the vulnerabilities I found.

Problem is that I have no idea where to start and or what methods to use. I also don't know what I could target.

The website in question is: schoolathome.ca

Thanks in advance

ok bro you can first try sql injection using burpsuite if you finde some thing. then you can try nmap on tcp ports on host and if you find some open ports and vnl an then hack the shit out of that

WebArt - September 30, 2023, 2:02 pm

i think sql injecion will be best way for this website. but here you will find many more methods also
