Thread: [Royal Hack - CS2 PureDX Hack - Instant Delivery - VAC Future Proof](#)

UnstuckK - October 3, 2023, 6:50 am

royalhack released the brand new CS2 PureDX Hack

Avoid any new VAC Detections routines ! ?

Only for Legit purposes, rank up fast ! ?

[Video: https://www.youtube.com/watch?v=X_4cJ2VYRoE]

The hack is still being worked on, aimbot and triggerbot will soon be released after we make sure those avoid anticheat's checks.

The price is pretty cheap as we took under consideration the lack of features other than the wallhack.

5€ / Months

Including the price in your thread would be an amazing start...

Edit:

Any sort of cheat detection history we can look at? Obviously CS2 is new but anything for your other hacks? The point i'm getting at is why should people trust your cheat to not get detected and thus trust it to avoid losing their skins?

Thats not a good thing to expect, people expect all the info to be here, where the marketing is done. Good to see you've added it.

Used to have RH back when the first ring3/0 bust happened.

Do you still value Lifetimes from back then?
Is v3n (I think it was him?) still coding or did you change coders

Hello,

We closed the doors for a few years, so all "cheap subscriptions" of the old good times are gone.

We also decided to not sell lifetime plans again.

v3n0m4 is still here ! :)

wav went back to PhD, so busy with that.

MattDog got sued by Wargaming, in Russia :(

He's still alive of course, and rebooting something.

v3n0m4 still here, mencore too :)

Jesus, you guys makes me wanna cry.

I'm so glad to see many people still recognizing us from back to 2007.

Nowadays, kids only knows some sk33t or qimwqre stuff. Only old folks like us knows how it all started :(

Not sure how this vouching thing works fully but I vouch!

Great hack for the price and so far 0 trustfactor issues or bans.

Laughing Man - October 19, 2023, 10:58 am

Vouched, they are still an amazing cheat. Amazing team working behind them.

If you are worried about not losing your account or skins. They are definitely your go-to.

Same people since 2007, so you know it's going to be great!

bohne1337 - October 22, 2023, 1:15 pm

are you guys using ring0 again?

Or offering any efi cheat or smth?

really glad you back, sad that my subscription is gone.

Last time I posted I visited your page but it was super laggy...

Hello !

Not ring0 anymore :)

We did not notice any lags on our website tho, does it work fine now ? :)

How can you promise "VAC Future Proof" ?

Not promising anything.

When a private hack claims it's undetected, it's never 100% sure. Would be too easy :)

What I'm pretty sure of tho, we avoid many of the traps Valve is currently adding into CS2, and from what we've seen while reversing, it looks like we will avoid future detections as the path they are currently following does not lead to our methods, at all.

Of course, cheating always involve a risk of a ban. But since 16 years already, we avoided a lot of banwaves (the recent CS2 banwaves included).

That is good & understandable but considering you put that in the title, if it is not a promise, you might want to consider wording it something else.

Good luck.

RH, was one of the very first providers to build a universal injector that ran ring0.

Their new method is exceptional.

I have not tested it myself, but looks rather legit from what the comments say.

I have no used RH since CSS ~16+ years ago still so can't comment on anything else related

Our former coder how02 helped virtus from satan5 "cracking" those :D Well at least it was virtus who released the crack on reddit, it's probably just how02 behind the crack, because virtus has no coding/reversing knowledge whatsoever.

The crack was made in few days only because how02 has 80% of our code since he worked for us few years ago.

It's just a dick move, from jealous people, but we are used to those attacks with those two :) Right after the release of our CS2 Hack they DDoSed royalhack for a few days.

On the other hand, royalhack has been selling hacks since 2007, and has been cracked only once, by DeepBlueSea, in 2008.

This 2023 crack is not really a crack, they have our code, they just emulate :D I wouldn't call that cracking

Of course they are trying to hide the fact they did it, and pretend it's a random cracker who achieved this miracle of emulating the whole backendserver + injector/mappers and so on, of course it is false, they did it based on our code they had in their hands, and their lame attempt at hiding themselves reflect their real skills.

This is the steam account we see on the video of the crack release

<https://steamcommunity.com/id/amkamkamkamkamkamkamkamkamk/>

Of course avatar & name changed, he spammed steam name changes to prevent us from viewing the name in the video

How do we know it's him ? Well, to begin with, it's logical, they were pissed off we were selling CS2 hacks without triggering any detections unlike them.

But the steam profile used in the crack has an another url :D

Virtus is sick, can't stop lying :(

So yea no big deal, we will rework the parts they have in their hands to prevent them emulating everything again, but that takes time. We didn't change those parts before because we thought they would grow up, but they did not.

We don't care much to be honest, we focus on distributing our hacks to our users & avoid detections, unlike them o_o
