Thread: [Need Help with PureCrypter](#)

Pseekz - October 6, 2023, 9:16 am

Hey everyone,
could someone help me with the settings of the PureCrypter?

What are the recommended settings for "Payload Behavior" to keep the Payload FUD?

For example, according to Virus Scan, McAfee is shown to me cleanly (no virus), it was tested on another device, it was immediately recognized there.

I used following Settings:
Execution Delay - 30sec
Disable Internet

Grateful for any advice! Wish you a pleasant day and a nice start into the weekend.

Have you tried asking the seller [PureCoder](#)

cobra047 - October 6, 2023, 11:09 am

To make a FUD u have 3 options:

1_code the payload yourself ,code a server and a backdoor, because you coded it urself means it is new and no antivirus has it in their database.

2_use new tools if you're a beginner, because new tools' payloads have new payloads that aren't in the antivirus' database.

3_change the binary, with hexeditor u can change some words or stuff that aren't so important in the payload's binary, there's some things if you change them it will stop the functionality of the payload completely, so be careful.

Thank you! I guess i need to try few Methods, to get it done.

Just a newbie starting with ?

Can i send you a PM?
