Thread: [Virtual machines](#)

zeroz3r0zero - October 14, 2023, 2:15 am

Are there any other possibly better machines I should be looking into other than Kali and Parrot?

Try BlackArch, BackBox, or Pentoo. They're good like Kali and Parrot.

Tails is a portable operating system that protects against surveillance and censorship. You can use it to protect your Identity.

Also as above user suggested above Blackarch, BlackBox, ArcStrike are also some good and popular distros for Penetration Testing and Ethical Hacking which are co-related to kali and parrot.

Are you just looking for a preset of tools? or a nice fitting distro, you can do everything you want on Ubuntu.

What kind of feel are you looking for?
