Thread: [difficulty in having remote access to android](#)

Dumbell - October 17, 2023, 8:05 am

i make payload (android meterpreter reverse tcp)and transfer and install to android
then i set exploit multihandler and payload
and lport and lhost
and when i exploit
i get no sessions

i am using kali in vmware

please tell me how to get sessions in msfconsole

i set lhost the ip of my vmware kali

and using a real world android device

(Oct 17, 2023 08:15 AM)Dyne Wrote: [\[CITE\]](#) You are going to struggle with this for newer versions of android. (11+) Especially with exploiting TouchID/accessibility. You may be able to get WAN, sms dumps, log dumps but not too much else.

Keep in mind your payload will need to be signed (you can use keytool or jarsigner with zipalign).
Please ensure your MSF base/environment is working. WAN needs to report externally.
I've never tinkered with Android related stuff, great knowledge you got there.
