Thread: [StrelyCleaner - MultiTools](#)

fisica638 - October 20, 2023, 7:27 pm

I come to share the update of my old software, [StrelyCleaner](#).

Features

?Hardware Info	Show important information about your PC.
?Antivirus	A small antimalware, it is especially powerful in detecting and disinfecting USB devices.
?System/Game Booster.	Optimize Ram&CPU and improve overall performance.
?Cleaner	Clean the garbage that applications leave on your PC.
?System Tweats	You can choose which feature to activate/deactivate, to improve your system.
?Custom App Themes	This application is made with Winform, but it still doesn't have to be ugly.

Download

Haven't checked the code but the Guna UI looks good.

With themes it looks even better:

Yeah.

Hackers - October 22, 2023, 5:47 am

This looks pretty clean from a UI perspective. Question - does your program use an updated feed of security concerns to find malware, or is it essentially dated to when you first created it? I only ask because a lot of the antivirus & malware cleaners are updated frequently to find new threats, and I'm asking because I was thinking about this issue last night - to make an AV or anti-malware software, there is so much work in making sure modern threats are added to the scanner over time.

Anyways, good luck with this project, it looks like you got it pretty far along originally. Did you ever sell copies, or is this a personal project?

fisica638 - October 24, 2023, 5:56 am

Everything I do is a personal project, it is my hobbit.

It is an antimalware scanner, I did it too, but it is only a container of many useful functions, I mean it is not finished yet, I plan to use yara for a good scanner, for now the antivirus section is at its most basic.

Nice! You have to start somewhere and there's always room for a better scanner. Do you code for work too? Seems like something like this could help you land a pretty good job if not. Keep it up, sounds like you have good plans

The Loader interface of my Cheat looks even better:
